Choosing the right company to improve your home

As one of the county's leading independent Window companys, we are committed to giving you the highest levels of service from the very beginning to the finishing touch.

All products are manufactured to meet CE marking requirements as well as tested in accordance with strict BBA guidelines. As such, we provide a comprehensive 10 year warranty for your peace of mind.

High performace products designed to save energy

ENERGY EFFICIENT

All of our PVCu windows feature energy efficient glazing to help you save money and prevent greenhouse gases.

HIGH QUALITY PVCu WINDOWS DOORS CONSERVATORIES ORANGERIES PORCHES

Introducing the world's most stylish PVCu Window

From the UK's most advanced PVCu Manufacturer

The windows and doors featured in this brochure are extruded, machined and assembled in the UK's most advanced factory of its type. Swift Frame only extrude the profiles for themselves ensuring the finest tolerances are met.

The extrusion facility was extensively modernised recently with a multi million pound investment. Part of this investment was spent on the latest technology die's to produce the decorative, high impact, multi chamber range of windows and doors that are both energy efficient and attractive.

All extruded profiles use the latest lead free compound using Calcium/Zinc stabilisers.

 Made in the UK to the highest industry standards

MADE TO THE
HIGHEST INDUSTRY
STANDARDS

The BBA is the UK's major authority offering the approval of construction products, systems and installers. The Agrément Certificate for product approval involves testing as well as factory and on site inspections. The number that is quoted on the certificate is totally unique to our product to give you the peace of mind and assurance that the window has been thoroughly tested.

Swift Frame's manufacturing plant uses the latest technology

Swift Frame boast the most advanced manufacturing plant in the UK that was purposely designed to make windows and doors to the most exacting standards.

The fully automated production lines work to the finest tolerances using the very latest computer controlled, precision machinery and each window is individually manufactured to your order and thoroughly inspected prior to despatch.

 **CE Compliant Product range**
The CE marking indicates the compliance with EU legislation of a product. It also proves that the product has undergone stringent testing and quality control procedures during every aspect of manufacture. The CE logo is recognised worldwide as the hallmark of a quality assured product.

The product range is extruded, machined and assembled in the UK's most advanced factory type that has been extensively modernised recently following a multi million pound investment.

OUR COMMITMENT TO GREENER MANUFACTURING

Whilst your new Windows, Doors and Conservatory will give you many years of reliable and efficient use, at the end of their working life they are fully recycleable and this process can be done up to 8 times giving the material an effective life span of over 200 years. Swift Frame also recycles the water that is used in the extrusion of PVC-u profiles, as well as all waste plastics, metals and paper.

ALL OUR WINDOWS AND DOORS CAN BE RECYCLED

Your Approved  Window Installer

As your Swift Frame Installer, we have been thoroughly approved and are highly qualified in all aspects of installation. We will fit your new Windows, Doors and Conservatory with the minimum amount of disruption with stunning results.

An attractive, energy efficient product range

Saving energy has never been so important - choosing an efficient window system is vital.

Besides the aesthetic appearance, for many people, one of the most important factors when choosing new PVCu windows is the energy saving qualities they offer. Using state of art manufacturing methods and the highest grade of components, our PVCu Window range out performs most window systems to make your home a warm comfortable environment and give you a significant saving on your heating bill.

OUR WINDOWS ARE DESIGNED TO...

- REDUCE ENERGY CONSUMPTION
- SAVE ON ANNUAL HEATING COSTS
- LOWER YOUR CARBON FOOTPRINT
- COMBAT CLIMATE CHANGE

PVCu Window U values

In general terms, a U Value is the measurement of the rate of heat loss through a material. This means that in all aspects of home design you should strive for the lowest U Values possible because the lower the U Value, the less heat will be needlessly escaping.

A single glazed window with standard glass will have a typical centre pane U Value of 5.6, whilst a modern PVCu double glazed window with standard glass will have a minimum U Value of 1.6

High performance Windows that look stunning when installed

Whilst our windows are made to meet the highest energy saving standards, they are also designed to look stunning when installed. Whether you opt for the fully featured or the fully chamfered profile, you can be sure that the style you choose will perform in the most severe weather conditions as well as look good all year round.

Efficient by design & technical innovation

A MULTI-CHAMBER CONSTRUCTION

Our profiles are made to the highest industry standards and have achieved BBA certification. The PVCu multi chamber construction is lead free and designed to provide outstanding strength, thermal efficiency and acoustic performance. The PVCu profile also contains a U.V. stabiliser to prevent discolouration.

B GLAZING BEADS

See page 19 for glazing bead options.

The hollow glazing bead that houses the weather seals is co - extruded with a T.P.E. - Thermal Plastic Elastomer. Whilst proving a stable housing for the seals the beading is flexible enough to expand and contract in extreme weather conditions whilst providing maximum thermal protection. The choice of beading we offer depends on whether you opt for our fully chamfered or fully featured profile.

C THE SPACER BAR

The spacer bar separates the 2 panes of glass in a double glazed window. Currently, the most commonly used bar in most sealed units is Aluminium. However, in order to maximise thermal efficiency in a double glazed unit, we would recommend a warm edge spacer that is up to 20% more efficient at preventing heat transfer around the window.

Ask your Sales advisor for details on Spacer Bar options.

D GLASS COATINGS

To ensure your windows achieve an optimum Energy Rating, we recommend you opt for Coated glass, widely known as Low E, or low-emissivity glass. It has a transparent metallic coating that works in two ways to economise heating energy. The dual action coating reflects heat back into the room, whilst allowing heat and light from the sun (known as passive solar heat gain) to pass through.

Ask your Sales advisor for Coated Glass options available to you.

2 durable weather Seals for outstanding performance

All of our Window styles feature 2 TPE weather seals to ensure the highest standards of thermal efficiency.

The unique construction of each seal is corded to withstand extremes of temperature and last the lifetime of the window. It will also be immune to rotting, stretching and mould. When the window is closed, the seals on the external and internal frame and sash rebates combine to offer outstanding protection against the weather and noise pollution.

Key features include...

- HIGH PROTECTION AGAINST EXTREME WEATHER
- WILL LAST THE LIFETIME OF THE WINDOW ITSELF
- HELPS TO REDUCE GENERAL NOISE POLLUTION

Retaining heat from the sun

The Solar Heat Gain of a window is its ability to transmit Solar Energy (heat from the sun) into a room. Using a modern manufacturing process and adopting the latest technologies in Coated Glass and spacer bars, our windows will reflect heat generated from your house back into a room whilst allowing heat from the sun to enter your home.

TECHNICAL INFORMATION

A OUTER GLASS

Coated Glass is specially formulated to be extra clear and highly transparent compared to ordinary clear float glass used on many units. It maximises solar heat gain and natural light to optimise energy efficiency inside.

B INNER GLASS

The inner glass of the sealed unit incorporates the latest advancement in thermally insulating glass coating technology. The result is that it effectively reflects long wave heat radiation back into a room, minimising heat loss through the glass.

C CAVITY & FRAME

Using the Optimum Cavity Width of the sealed unit and housing it in a high quality Multichamber PVC frame construction helps to reduce heat loss and condensation.

D ARGON GAS - OPTIONAL

The Argon gas we use to fill the glazing cavity is far more energy efficient than commonly used air as it reduces the cold air coming in and restricts warm air going out.

Save up to £315.00 a year on Energy Costs

If your home is single glazed or your double-glazing was installed prior to April 2002 then you could be losing more heat than necessary and therefore money, literally out of the window. However, by switching to Energy Efficient Windows you can save energy and reduce your annual household heating costs by as much as £315.00 per annum.

Our Windows will reduce the amount of heat you need

With the ever increasing cost of energy, it's now more important than ever to conserve the heat generated in your home. As most homes have wall and roof insulation, glazing and the efficiency of your windows remain the prime factor when calculating heat loss.

Installing our energy efficient windows will positively reduce the amount of heat you need to generate and the result will be significant savings on your annual heating bill.

Maximising Energy Efficiency

Further benefits of Solar Heat gain...

MORE COMFORTABLE ROOMS

Better insulation means fewer cold spots and drafts near windows and doors

LESS CONDENSATION

The inner surface of the glass stays warmer therefore reducing the chance of condensation

N.B. Please note that condensation is a natural occurrence and can never be totally eradicated

LESS TINT TO THE GLASS

With clearer vision through your windows your curtains or Georgian Bars do not look discoloured

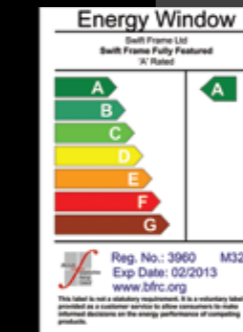

LOWER FUEL BILLS

With the benefits of improved indoor heat retention and solar gain from outside, the cost of keeping your home nice and warm will be greatly reduced

The ideal Energy Rating for your home...

Window Energy Ratings (WER) are a guide to the energy performance of your windows. The British Fenestration Ratings Council (BFRC) window energy rating scheme checks all the components to ensure the final window achieves the energy efficient standard claimed. This means that you just need to look for the A-G ratings and remember A is best – the higher the energy rating, the more energy efficient it is.

With each high performance PVCu Window we produce, there are an infinite number of components that determine the Energy Efficiency of a particular style. Please ask your Sales Advisor as to what rating would suit your requirements best.

“Our energy efficient windows will significantly reduce your home heating requirements and annual heating costs.”

Enhance your quality of life

Our energy efficient windows will not only save you money, they'll also reduce noise and increase security

Improving your home with our PVCu Windows will do far more than transform the look of your home. They will also make it warmer, more secure as well as reduce noise pollution. It all adds up to a more comfortable home and a peace of mind that only our 10 year comprehensive warranty can provide.

Whichever style you choose, you can be sure they will dramatically improve the look of your home and greatly add to its level of comfort.

Our Energy Efficient Windows make a world of difference

When you heat your house with oil, gas or coal, you also generate CO₂. Even if you heat your house with electricity, the generation of the electrical power may also have emitted a certain amount of CO₂. It is the way the world works but if like most people you would like to minimise the amount of CO₂ that heating your home produces, fitting our energy efficient windows is a good move. In the UK alone, up to 5 million tonnes of CO₂ emissions could be saved each year if everyone had Energy Efficient windows installed.

Taking steps to lower your Carbon Footprint

If you live in a single glazed house and install Energy Efficient Windows, you could reduce the energy you use by 0.30 tonnes or 18% - almost reaching the Government target of 20% reduction per household. Add to this other simple energy saving measures - such as insulating your home and turning down the central heating by 1° C - and you could be making a real impact on reducing your carbon footprint.

CO₂ REDUCTION

Preventing Greenhouse Gas

LESS NOISE POLLUTION

If you live in a noisy city or near an airport or a busy road, noise pollution is inevitable and can have a negative impact on your health and well being.

The multi chamber construction of our window profile, with twin weather seals on the outer and inner edges and a sealed glass unit with a full 20mm space between the panes will greatly reduce outside noise pollution and enhance your quality of life.

From manufacture to professional installation, we are committed to...

- Producing stylish, energy efficient PVCu windows using the latest technology
- Use only the highest grade of materials and components from certified UK suppliers
- Warranty your new PVCu windows from failure for a comprehensive 10 year period

"All of our PVCu windows feature energy efficient glazing to help you save money and prevent greenhouse gases."

Contemporary

VERTICAL SLIDER AND TILT & TURN WINDOWS

Classic looks & modern technology combine

Our range of vertical sliding sash windows are classically designed with all the benefits of modern materials and 21st century manufacture.

Unlike the wooden sash windows of Victorian times, our sash windows are made from high performance PVCu to provide strength, weather resistance and an easy smooth operation whilst retaining their elegant appearance to include mock horns.

With no painting or peeling to worry about, our sash window range will compliment the style of contemporary and period homes for many years.

Composite doors

Great looks and highly durable, our Composite doors are available in a wide choice of colours and styles

Our Solidor range offers an outstanding choice of solid laminate timber core composite doors that combine classical, modern or contemporary styling with a full range of high security locking features.

Each door is completely encapsulated within a highly durable plastic edge banding and two thermoplastic door skins so you will never have to worry about painting or varnishing.

SPECIFICATION INCLUDES...

- Wide choice of Colour options - see page 42
- Extensive Recycling programme - no landfill
- Made in the UK to minimise carbon footprint
- Lead free door skins and edge banding

CO₂ FRIENDLY

All of our Composite Doors are made from wood that is carefully sourced from sustainable forests.

For details on our full range of Composite Door styles please ask your Sales Advisor for our Composite Door brochure.

Bi-fold doors

A stunning way to bring home & garden together

A Bi-Fold door allows air and light to flood into your home and really bring the outside in. As an alternative to French doors or Patio Doors they look quite stunning when open and are designed to function with simplicity and ease.

With sleek good looks and an ability to provide a clear, unobstructed opening to your garden, the Bi-Fold door is becoming increasingly popular especially for people with modern or contemporary style homes.

They are also suitable for internal use to separate the main home from a Conservatory or a dining room from a living room - when fully open, two rooms become one large living space to enjoy.

SPECIFICATION INCLUDES...

On all of our bi-fold doors, the cill and track are incorporated into the threshold which results in a slimline appearance and comfortable access.

- Option of 2 to 6 door panel configuration
- High Security to include Anti - lift device
- Smooth, durable rollers for easy action
- Cushioning buffers top and bottom
- Internally beaded for extra security

ENERGY EFFICIENT

All of our bi-fold Doors feature energy efficient glass to help you save money and prevent greenhouse gases.

Patio doors

Let the sunshine in and enjoy the view

Available in two, three or four pane configurations, an in-line sliding Patio Door is the most popular choice to bring home and garden together.

It is also an ideal option for restricted openings where a hinged door would prove impractical. Made to the same high standards as our Window range, all of our Patio doors offer style and multi point locking features.

French doors

Continental style adds a touch of class

A classic design for traditional or contemporary properties, our choice of French doors offer all the benefits of a wide opening to your garden or a grand entrance as a front door to your home.

Available in a choice of PVCu or Composite, there's a stunning choice of colour options too - White, Rosewood, Mellow Oak and Schwarz Braun for PVC- u and a wider choice for Composite.

See page 42 for colour options.

SPECIFICATION INCLUDES...

- Available in PVCu or Composite
- High Security locking to include hinge bolts
- Attractive range of door furniture - page 43
- Low threshold available for easier access

SPECIFICATION INCLUDES...

- Choice of 2, 3 or 4 pane configurations
- High Security to include Anti - lift device

ENERGY EFFICIENT
All of our Patio & French Doors feature energy efficient glass to help you save money and prevent greenhouse gases.

Your favourite room in the house

Having a Conservatory installed is one of the most rewarding home improvements you can make

Once the preserve of the wealthy to cultivate exotic species of flora, the modern day conservatory has evolved to become the UK's most popular home extension providing a versatile space that brings home and garden together in perfect harmony.

Given the advances in coated glass technology and modern day insulation methods, it is also a place you can enjoy throughout the year.

See page 8 and 32 for more information on Coated Glass Technology.

Home & Garden in perfect harmony

There is no better way to enjoy the seasonal changes in your garden than from the comfort of a Conservatory. With so many Window aspects, your Conservatory offers a unique panoramic view of the outside world whilst letting the natural light pour in even on the darkest of winter days.

ENERGY EFFICIENT

Our Conservatories feature energy efficient glazing to help you save money and prevent greenhouse gases.

“The way to ensure summer in England, is to have it framed and glazed in a comfortable room”

Horace Walpole - 28th May 1774

In tune with nature

Every aspect of your Conservatory will be designed to be environmentally friendly and in tune with nature. From the thermal performance of the windows and roof to the heat retaining qualities of the build, all will combine to offer the maximum in Energy efficiency and low running costs.

An exciting choice of style

The conservatory of your dreams starts with choosing a design to suit your home and lifestyle. You also want to consider its size in proportion to your house and what aspect would be best in relation to the sun and your garden.

The Victorian is probably the most popular style of conservatory, with its elegant period looks and choice of ridge cresting. Edwardian and Georgian are similar, but have square fronts rather than the angular front of the Victorian design.

Whichever style you choose, we offer an attractive choice of finish to complement the exterior of your home as well as the interior decor.

See page 42 for permutations of interior and exterior colour finish

Creatively designed with you in mind...

From our modular designs below, there is every chance that one of them will be ideal. However, as every conservatory we install is made to measure, we can customise your choice to suit your individual requirements in every way.

FREE DESIGN & SURVEY

SEE BACK PAGE FOR CONTACT DETAILS

The Lean-to

The lean-to design affords optimum space and is ideal for properties with a limited or difficult area in which to extend - they are also the classic choice for bungalows and houses with height restrictions.

The Victorian

The classic Victorian Conservatory is available as a 3 or 5 facet design and offers that elegant period look complete with a choice of ridge cresting.

The Edwardian

The clean and bold lines of the Edwardian/Georgian Conservatory have a traditional appeal and often the favoured choice for those who live in older or period properties.

The P shape

The subtle combination of a Modern Lean-to and a Victorian design has created the dual aspect 'P' shape which is considered the ultimate choice for the larger Conservatory.

The T shape

The T-Shape conservatory is a combination of both Sunlounge and either Victorian, Edwardian or Gable-Front design and it's style suits all house styles and bungalows.

Front Gable

The Gable Front conservatory gives maximum living space for any given area. It suits most house styles and is ideal for houses with a height restriction.

Your special place for all seasons

With modern heating methods, efficient ventilation and the advances in Coated Glass technology, your conservatory can be a comfortable place to be in the height of summer as well as the depths of winter.

To help maintain an ambient temperature in your Conservatory throughout the year, we offer a choice of roof options to include Coated Glass or Polycarbonate. Both are thermally efficient and designed to perform in extreme temperatures.

Coated Glass

Our Coated Glass contains a unique combination of metal oxide layers that are applied using a magnetically enhanced cathodic sputtering process under vacuum conditions. In English, the result is that the glass effectively reflects long wave radiation from your heating appliance back into your conservatory in winter whilst deflecting excessive Solar heat in the summer.

ENERGY SAVINGS

In summer, our coated glass will deflect approximately 70% of the solar energy (heat from the sun) back into the atmosphere.

In winter, the glass works in reverse by retaining heat generated from within your conservatory, thereby minimising the amount of heat you need to produce to be comfortably warm.

Polycarbonate

Lightweight yet exceptionally strong, our Polycarbonate roof is a popular choice.

The multichamber Polycarbonate roof is a popular choice and offers the benefits of being lightweight, virtually shatterproof and 200 times stronger than glass. Available in a variety of thickness it also provides excellent thermal and fire retardant properties.

COLOUR OPTIONS

Polycarbonate is available in a choice of tints to complement your conservatory frame.

PVCu roof vent, manually or electrically operated (optional extra)

Optional vented ridge to allow good air circulation

Most Polycarbonate roofs are tested to BBA standards and have a life expectancy of at least 25 years

Roof comprises structural grade aluminium capped and clad with PVCu for low maintenance.

Decorative glazing bar top caps feature twin co-extruded gaskets for even tighter weather sealing.

The benefits of Coated Glass include...

It deflects heat in the summer...

10° Centigrade (18° Fahrenheit) - that's the dramatic difference 'Coated Glass' can make to the internal temperature of a south-facing Conservatory in sunny weather that can make all the difference between a forbidding 'furnace' and a comfortable and relaxing room.

...retains heat in the winter

In winter, 'Coated Glass' performs in reverse - maximising heat retention so on long cold winter evenings you are able to spend more time enjoying your Conservatory. It also means, of course, that less energy is required to maintain a comfortable temperature.

Optional self cleaning.

'Coated Glass' has also been developed so that water runs clean away taking the dirt with it, so your Conservatory stays cleaner for longer, needs cleaning less often and is easier to clean due to reduced friction. Ask your Sales Advisor for details of this option.

Polycarbonate Benefits

- Lightweight and virtually shatterproof
- Available in an attractive choice of colours
- Good thermal efficiency properties
- Life expectancy of at least 25 years

Professionally and carefully installed

The team that will undertake the installation of your Conservatory are all fully trained and highly experienced. All work will be undertaken to local authority standards and from the very beginning to the finishing touch, they will treat you with the utmost courtesy and your home with the respect it deserves.

In every case, your installation will be carried out to Local Authority Standards with care and attention to every detail.

Our Installation Service includes...

- High quality building work to Local Authority Standards
- Your home improvement is fully warranted for 10 years.
- A courteous service with respect to you and your home.

Footings

At the first stage of installation, our building team will undertake all foundation and basework to Local Authority Standard. They will then erect dwarf walling to match the existing stone, brick or render of your house when possible.

Finishing Touches

To complete the dream of having a tailor made Conservatory installed, we offer a wide range of attractive accessories for that individual touch.

Together with your choice of profile colour and glass preference, all will combine to make your conservatory a very special place that's unique to you.

A roof lantern is a stylish alternative to a conventional Conservatory roof

PLANNING PERMISSION

In the unlikely event that you require planning permission to have your conservatory installed, your Swift Installer will either recommend a local architect to undertake all the necessary procedures with the planning authorities or undertake the application themselves on your behalf - please ask your Sales advisor for details of services offered

SERVICES TO CONSIDER

- Local Authority Planning Permission
- Heating, ventilation and electrical points
- Ceramic, stone or laminate flooring
- Glass options to include coloured lead or bevel
- Wide choice of extras for that individual touch

ASK YOUR SALES ADVISOR FOR DETAILS

Available in a variety of sizes and finish to include, brass, white or chrome, a paddle fan will gently circulate the air in your conservatory on a warm summers day and can be operated by a pull chain or an Infrared remote control

Downlighters create a soft ambient light in your conservatory and are available in a choice of brass, chrome or white finish.

A roof vent is an alternative way to circulate the air in your conservatory on warm summer days.

The most popular accessories we offer include...

- An attractive choice of Paddle Fans
- Energy Efficient 12 volt Lighting
- Matching Roof Vent Windows
- Automatic air ventilation

Window Security

A superior system that offers real protection against a home break in.

The security we offer on our Window range is designed to make life easier for you and virtually impossible for even the most determined thief.

Our internally glazed Windows are fitted with Espagnolette high security locking as standard. Optional shootbolt mechanism offers enhanced security that consists of 2 high tensile brass bolts and a high strength centre deadbolt which lock securely into ultra strong, rust free keeps.

LOCKING HANDLE AS STANDARD

The stylish and ergonomic design of our handle range will ensure years of reliable, trouble free use. Available in a choice of finish to include chrome, white, gold and black, each handle incorporates an easy action thumb press opening button and key operated lock.

The Window Security Options we offer include...

- A** ESPAGNOLETTE MUSHROOM CAM
- B** ESPAGNOLETTE MUSHROOM KEEP
- C** OPTIONAL BRASS SHOOT BOLT LOCK
- D** OPTIONAL HIGH IMPACT RESIN SHOOT BOLT KEEP
- E** OPTIONAL DEADLOCK WITH KEY OPERATED HANDLE
- F** INTERLOCKING HINGE
- G** OPTIONAL HINGE PROTECTION

Ask your Sales Advisor for advice on the most appropriate combination of security features to suit your home.

Upgrade to the latest Nico™ system for the ultimate defence

As one of the UK's leading hardware manufacturers, Nico's range of window products have been designed to meet the very highest standards of security and through years of research and development have achieved BSI as well as BBA certification.

The 6 point integral security system they produce is made from high tensile steel and in one easy handle action, up to 4 Mushroom cams are locked into place and shootbolts at the top and bottom of the window engage. The result puts window security onto a new level and it is highly recommended for the ultimate defence against a home break in.

- UP TO 4 HIGH SECURITY MUSHROOM CAMS
- 2 SHOOTBOLTS ENGAGE TOP AND BOTTOM
- THUMB OPERATED LOCKING HANDLE WITH KEY

Tried and tested to exceed BS7950

The Nico Two TwinCam Shootbolt is designed for strength and reliability. Manufactured in the UK to the most exacting standards the new lock provides an effective, secure locking system that has been tested to exceed the requirements of the recognised security standards BS7950 and Secure By Design.

It also has a special coating (supercoat 500) that enables it to achieve a grade 5 (exceptionally high resistance to corrosion) making it suitable for coastal and industrial use.

Door Security

An integral locking system to deter even the most persistent intruder

We take door security very seriously and as the first port of call for unwanted guests, we have designed a security system to keep them out in the cold and you safely inside.

All Entrance Doors, Patio Doors and French Doors are fitted with a strong and effective roller/cam locking mechanism as standard. An option of 2 or 4 hooklocks with anti - lift bars can be added for extra defence.

Paddock

Innovators in hardware

Paddock are one of the UK's leading door security specialists offering a comprehensive range of locking features for Residential and French Doors. From the security options illustrated below, some features are fitted as standard, other devices are optional, depending on the amount of security you require.

Multi point locking as standard

Our door security options have been designed to give you, your home and your family the ultimate protection against forced entry.

The Options we offer include...

- A** MULTI POINT LOCKING AS STANDARD
- B** TOUGHENED CENTRE BOLT
- C** HOOKLOCK WITH ANTI LIFT BAR
- D** DEADLOCK LATCH FITTED ON ALL DOORS
- E** OPTIONAL ANTI JEMMY HINGEBOLTS

Ask your Sales Advisor for advice on the most appropriate combination of security features to suit your home.

ASTRIGAL BAR

Astrigal Bars feature on the outside of the glass and offer that Georgian appearance of individual panes that can make all the difference when looking for authenticity or individuality.

They can be fitted to most window styles and will greatly enhance the look of your home and add a touch of nostalgia to its appearance.

SPECIFICATION INCLUDES...

- Can be fitted to any style of window
- Attractive choice of colour finish
- Wide range of glass options

INTERNAL BLINDS

Attractive, maintenance free and easy to operate, internal blinds are a popular alternative to other window coverings. The blind sits within the sealed unit and is operated by a unique magnetic system that has been thoroughly tried and tested.

SPECIFICATION INCLUDES...

- Smooth, easy action to open and close
- Maintenance free - no dust or cleaning
- Improved solar control - no UV fading
- Attractive range of colours available

GEORGIAN BAR

Georgian Bar is a fretwork system that sits inside the double glazed unit. It replicates the look of a traditional Georgian window but is easier to maintain as the bars are inside the unit, leaving you with smooth areas of glass to clean instead of lots of individual panes.

SPECIFICATION INCLUDES...

- Can be fitted to any style of window
- Attractive choice of finish available
- Easy maintenance and cleaning

Add some colour

To further enhance your chosen style of window, we offer a fantastic range of decorative panels and bevelled glass designs.

A must have for fanlight windows in period homes, they will also add an individual touch to your conservatory fanlights and any window where you want to maintain some privacy as well as let the light pour in.

To see a comprehensive choice of stained, leaded and patterned glass options, ask your Sales Advisor to show you the latest style catalogue..

AN EXAMPLE OF DECORATIVE & BEVEL GLASS DESIGNS

Hand crafted using slim-line bevelled glass we offer a range of set designs or a bespoke option to your individual design preference.

A sample of obscure glass patterns

For privacy, pure style or to allow more light into internal rooms, decorative glass gives you a whole range of attractive options.
